

True story of a man I met in the 1980s sitting in a chair with no arms and no legs - Jim LeBeau

In the mid 1980's while in the lift chair business I visited the home of a man in the south side of Milwaukee sitting in a wheelchair with no arms and no legs. He was in the end stages of diabetes experiencing the best modern medicine could offer. I explained that a lift chair could get him up...but then what? He didn't have legs to walk or hold himself up. He didn't have arms to hold himself up or transfer to a wheelchair. What good would a lift chair be? At this point I saw a look of hope turn to sick despair. Never have I looked into the eyes of another soul and seen such hopelessness. I hear that 75,000 or so arms and legs are amputated every year due to a sugar problem.

A few weeks later a gentleman from Brown Deer called. His leg had been black and blue leg from the end stages of diabetes. His doctor told him "I need to cut off your leg within two weeks or you will die". After hearing that he took a natural Shaklee multi-vitamin. His leg soon turned back to a healthy pink. *As he talked I could hear the thankfulness, faith, and joy in his voice.*

Not just Shaklee but natural vitamin E and many whole foods and herbs and such made by God have helped millions heal their diabetes, cancer, and more. That's why all churches should teach -

Make America Healthy Again in the name of Jesus.
