

TO SAVE A PLANET

Jim LeBeau

Things we need less of Things we need more of

Genetically Modified Foods (GMO) not labeled so you don't even know it -
Genesis whole foods made with love - thank God, but why are we blowing it?

Cruel to animals and sick to people factory farms abominably stinkin -
Friendly to animals and healthy for people family farms – what are we thinkin?

Manmade chemicals not safety tested about 80 thousand or so -
Respect for the organic wholeness of life – safety tested long ago.

Chemical farming hormonal alarming leaving estrogen carcinogenic trail -
Honor for the hormonal sanctity of life - “and He made them male and female”.

Mother's milk with body toxicity from chemicals transferred to baby -
Holiness and purity of mothers and lambs - and brother we don't mean maybe.

Money controlled mass media deception *to hoodwink* the public at large -
A merciful gospel to “heal the sick” - and the public won't be so large.

Colostomy bags, drug company bribes, and chemo for cancer – horray -
An apple a day? A whole grain you say? More wholeness in life? Let us pray.

A planet in stress, the oceans a mess - it's business as usual all the whilin -
A planet so clean the stars can be seen – and the children of God are a smilin;

Indifference from some and from others ho-hum - to any or all of above -
The healing truth from those “of truth” - and “faith that works by love”.
